

**Dated:** 1<sup>st</sup> October 2019

**Subject:** Compliance Certification Oct Update - TCF v1.1

Dear CMPs,

We are now completing the final stages of the inaugural TCF v1.1 compliance programme.

- **CMPs that have successfully concluded the Validator compliance** are listed here:

**Validator compliant CMPs that have implemented their CMP on ALL live installations:** please contact [tcf.compliance@iab europe.eu](mailto:tcf.compliance@iab europe.eu) to receive the official IAB Europe TCF v1.1 compliant seal.

**Validator compliant CMPs in a staging environment only** have until **November 20<sup>th</sup>** to roll out the compliant version on all live installations to avoid de-listing

- **Non-compliant CMPs:** CMPs that have been unable to develop and test a compliant CMP have been suspended temporarily whilst we continue to work with them to complete successful Validator compliance. The consent string carrying the ID of these CMPs is not valid and should not be acted on or passed to other vendors.
- **Spot-checks** – On November 20<sup>th</sup> we will implement a procedure of spot checks to verify CMPs full compliance on websites where they are implemented.
- **New CMP registrations** – will need to undergo the Validator test, which can be on a staging site, but will need to complete validation on a live site before they can be listed
- **CMP JSON file** - we are developing a machine-readable list (JSON file) of compliant CMPs. This will enable Vendors to easily identify if the consent string has been built by a compliant CMP and therefore if they can act on it.
- **TCF v2.0** – the Validator will be updated in due course to test TCF v2.0 CMP installations

Best regards,

The IAB Europe Team
